The floors should also be swept with the proper push broom to remove any large debris that may clog the drains, please place all debris collected into the proper trash can.**

- The 2 man doors into the production area will contain footbath's with a quat based sanitizer powder. The powder should be thick enough to cover the rubber fingers at the bottom of the foot bath. When the powder turns from blue to brown it will need to be replaced with fresh powder.
- When disposing of the doorway foot powder pour it into the drain and rinse. This will help eliminate pathogens and contaminates from growing in the drain pipes.

**Foam Cleaning;**

- To foam clean, use the large hose on the wall mounted foaming station and apply foam to all surfaces. When foaming start at the bottom and work your way up ensuring that all surfaces including the bottom get foam. Allow the foam to work for 5-10 minutes but do not let it dry. If it does dry a second coat will need to be applied. After 5-10 minutes rinse the equipment with fresh water, when rinsing start at the top and work your way down.

- To sanitize the equipment, use the small hose on the wall mounted foaming station and apply sanitizer to all surfaces. When applying start at the bottom and work your way up ensuring that all surfaces including the bottom get spray. The sanitizer is a norinse product and should be allowed to air dry.
