# COMPANY BACKGROUND

**Halal Watch World LLC** is a halal certification limited liability corporation based in the state of New York, and has operated in the certification industry since 1990. HWW is an organization that stands upon the trust of the Muslim public, and believes that it is imperative that their trust never be jeopardized. We maintain standards to the highest degree of scrutiny and perform regular audits for the protection of our constituents.

Halal Watch World understands that halal certification is a communal obligation (فرض كفاية), meaning, at least one person of the community must uphold it. If no one takes up this responsibility, the entire community bears a burden of sin. Therefore, we must be extra diligent with this effort. We realize the seriousness of the matter and understand the dire consequences of not filling this duty to the fullest capacity. God explains this to us in the Holy Quran by His statement:

***“ And say not concerning that which your tongue says falsely: 'This is Halal and this is Haram,' so as to invent lies against Allah. Verily, those who invent lies against Allah will never prosper...A passing brief enjoyment (will be theirs), but they will have a painful torment.”***

*[Al Quran] 16:116-117*

HWW ensures to the best of its ability a high level of authenticity is upheld. This allows them to gain the trust of the Muslim community, and garner strong relationships with companies who produce, process, and distribute halal products at all levels. By this, they are able to offer halal producing company's guidance and consultation on the direction of their processes and products, while ensuring that Islamic dietary standards are always maintained and monitored. Muslims can use this information in order to make well informed decisions about what they choose to eat.

**Legal Filings:** Halal Watch World holds registered trademark number 4728733, and Department of State (New York) number 4814343. Halal Watch World is also a registered halal certifying organization with The Department of Agriculture and Markets of New York State (See supporting documentation).

We begin in the name of God SWT

# CERTIFICATION CONSIDERATIONS

There are 4 main factors taken into consideration when determining the halal status of a product:

## **1. Is the product/ingredient Halal Aslan (by default)?**

If the product is Halal by default, then the location it is harvested, produced, or manufactured in, even if done so by a non-Muslim, is not necessary to inspect.

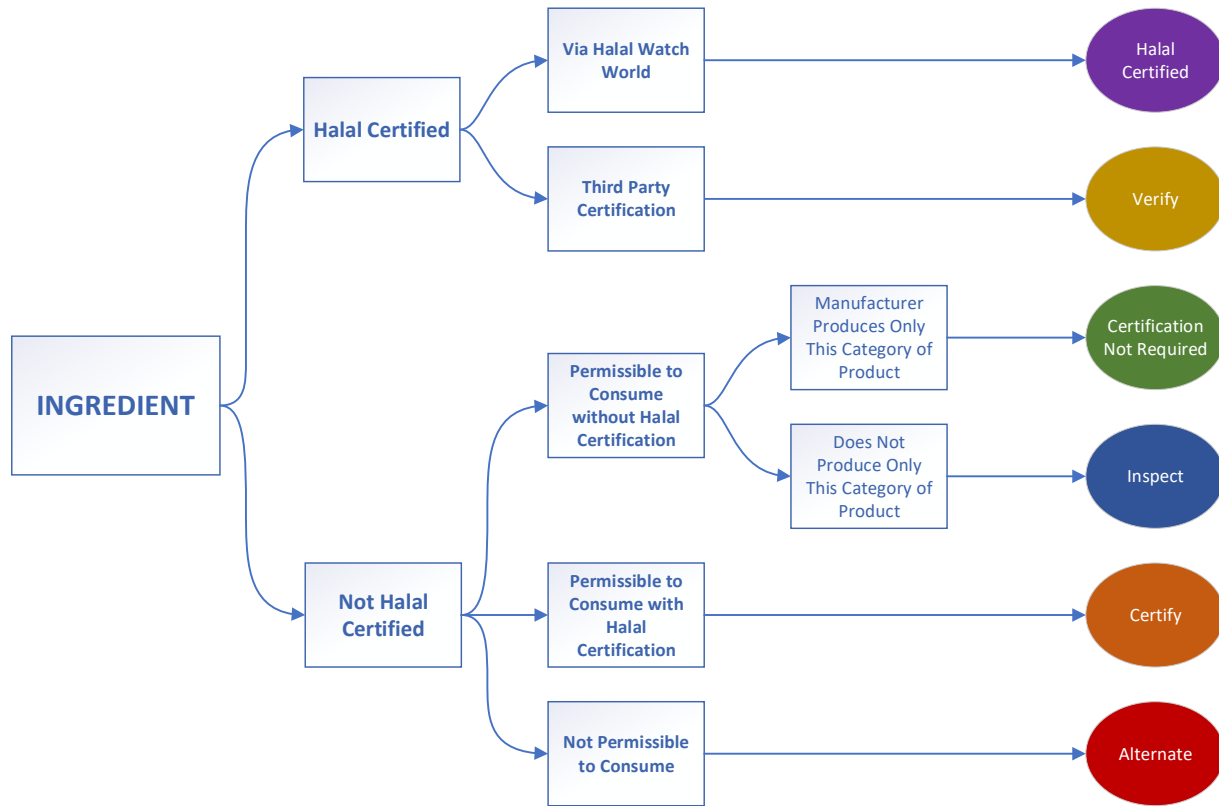

## **2. Is the product/ingredient Halal certified via another organization?**

If another organization certifies the product as Halal, then it is incumbent upon us to perform a *tahqeeq* (verification) certification of the establishment. We must be able to ascertain that the certifying body is competent and capable of determining the status of such products. In the event that we are unable to gain this information, our organization must inspect the location of production before certifying.

## **3. Are there any impermissible ingredients being produced in the same facility?**

As is the norm in Muslim minority societies, manufacturers produce both Halal and Non-Halal products in the same facilities. If other non-Halal items are produced in the same facility, an inspection may be required. In the event that an inspection is not possible, Halal Watch World reserves the right to utilize other forms of off-site audit procedures requiring documentation and the like in order to determine the facilities halal production capabilities. It is generally required for us to determine that the manufacturer prevents the following:

1. Product Contamination
2. Cleaning Method fulfils Islamic requirements
3. Separate storage locations between Halal and non-Halal products, or preventative measures are in place to remove the possibility of mislabelling
4. Halal certified label is visible either on the box or the product
5. Halal certificate from source meat supplier is valid

Regarding contamination, products cannot be cooked upon or within the same utensils without proper cleansing. This means that any liquid substance that interacts with non-halal products becomes contaminated. This includes oil, and other wet cooking surfaces. Thus, if a vat of oil is used to cook non-halal products (which is considered as filth), it cannot be used to cook Halal products without contaminating it.

#### 4. Are there any contents in the product that contain impermissible ingredients?

We refer to the list of impermissible consumables on the previous pages. If the product under audit is found to contain any of the ingredients on the ban list, these products cannot be considered as halal.

## FACILITY PROFILE

As the professional nail business continues to thrive and grow, Gelish (Nail Alliance) maintains a staff that helps keep this industry evolving and changing for the better. We celebrate the achievements of each department and team member – it's what they do that helps Gelish grow and become internationally recognized as the go-to brand for high-quality professional nail products.

<b>Product name</b>	<b>Client product #</b>	<b>HWW Product ID</b>
Entity Clean Breathable Base Coat		DR1005-CS01
Entity Clean Breathable Top Coat		DR1005-CS02
Entity Clean Breathable Colored Nail Lacquer		DR1005-CS03

## PRODUCT PROFILE

### Entity Clean Breathable Base Coat

### Entity Clean Breathable Base Coat

"A base coat is your best defense against staining. It "provides a clear protective layer between the nail and the pigment of the polish above," says Waldorf. A good rule of thumb is that the darker the color, the more important it is to use a base coat."

### Ingredient Status

Sulfuric Acid: – **Halal** (Aslan) [Sulfuric acid or sulphuric acid, known in antiquity as oil of vitriol, is a mineral acid composed of the elements sulfur, oxygen and hydrogen,

with the molecular formula  $H_2SO_4$ . It is a colorless, odorless and viscous liquid that is miscible with water.]

Trimethylpentanediy Dibenzoate: – **Halal** (Aslan) [Viscosity Controlling Agent - Maintains or alters the thickness of a liquid, mostly used in cosmetics]

Ethyl Acetate: – **Halal** (Aslan) [Ethyl acetate is the organic compound with the formula  $CH_3-COO-CH_2-CH_3$ , simplified to  $C_4H_8O_2$ . This colorless liquid has a characteristic sweet smell and is used in glues, nail polish removers, and in the decaffeination process of tea and coffee.]

Butyl Acetate: – **Halal** (Aslan) [n-Butyl acetate, also known as butyl ethanoate, is an ester that is a colorless, flammable liquid at room temperature. It is found in many types of fruit, where along with other chemicals, it imparts characteristic flavors and has a sweet smell of banana or apple.]

Nitrocellulose: – **Halal** (Aslan) [Nitrocellulose is a highly flammable compound formed by nitrating cellulose through exposure to a mixture of nitric acid and sulfuric acid. One of its first major uses was as guncotton, a replacement for gunpowder as propellant in firearms.]

Adipic Acid: – **Halal** (Aslan) [Adipic acid or hexanedioic acid is the organic compound with the formula  $(CH_2)_4(COOH)_2$ . From an industrial perspective, it is the most important dicarboxylic acid: about 2.5 billion kilograms of this white crystalline powder are produced annually, mainly as a precursor for the production of nylon.]

Acetyltributylcitrate: – **Halal** (Aslan) [Acetyltributylcitrate is an organic compound that is used as a plasticizer. As such, it is a potential replacement of DEHP and DINP. It is a colorless liquid that is soluble in organic solvents. It is found in nail polish and other cosmetics. It is prepared by acetylation of tributylcitrate.]

Isopropyl Alcohol: – **Halal** (Aslan) [Isopropyl alcohol is a colorless, flammable chemical compound with a strong odor. As an isopropyl group linked to a hydroxyl group, it is the simplest example of a secondary alcohol, where the alcohol carbon atom is attached to two other carbon atoms. It is a structural isomer of 1-propanol and ethyl methyl ether.]

Benzophenone: – **Halal** (Aslan) [Benzophenone is the organic compound with the formula  $(C_6H_5)_2CO$ , generally abbreviated  $Ph_2CO$ . It is a white solid that is soluble in organic solvents. Benzophenone is a widely used building block in organic chemistry, being the parent diarylketone.]

Polyvinyl butyral: – **Halal** (Aslan) [Polyvinyl butyral is a resin mostly used for applications that require strong binding, optical clarity, adhesion to many surfaces,

toughness and flexibility. It is prepared from polyvinyl alcohol by reaction with butyraldehyde. The major application is laminated safety glass for automobile windshields.]

Alcohol Denat: – **Halal** (Aslan) [Denatured alcohol is ethanol that's been mixed with other ingredients. Ethanol — also known as grain alcohol — is alcohol at its most basic. However, ethanol is dangerous to drink in large quantities, so it's “denatured” with additional ingredients to discourage people from drinking it]

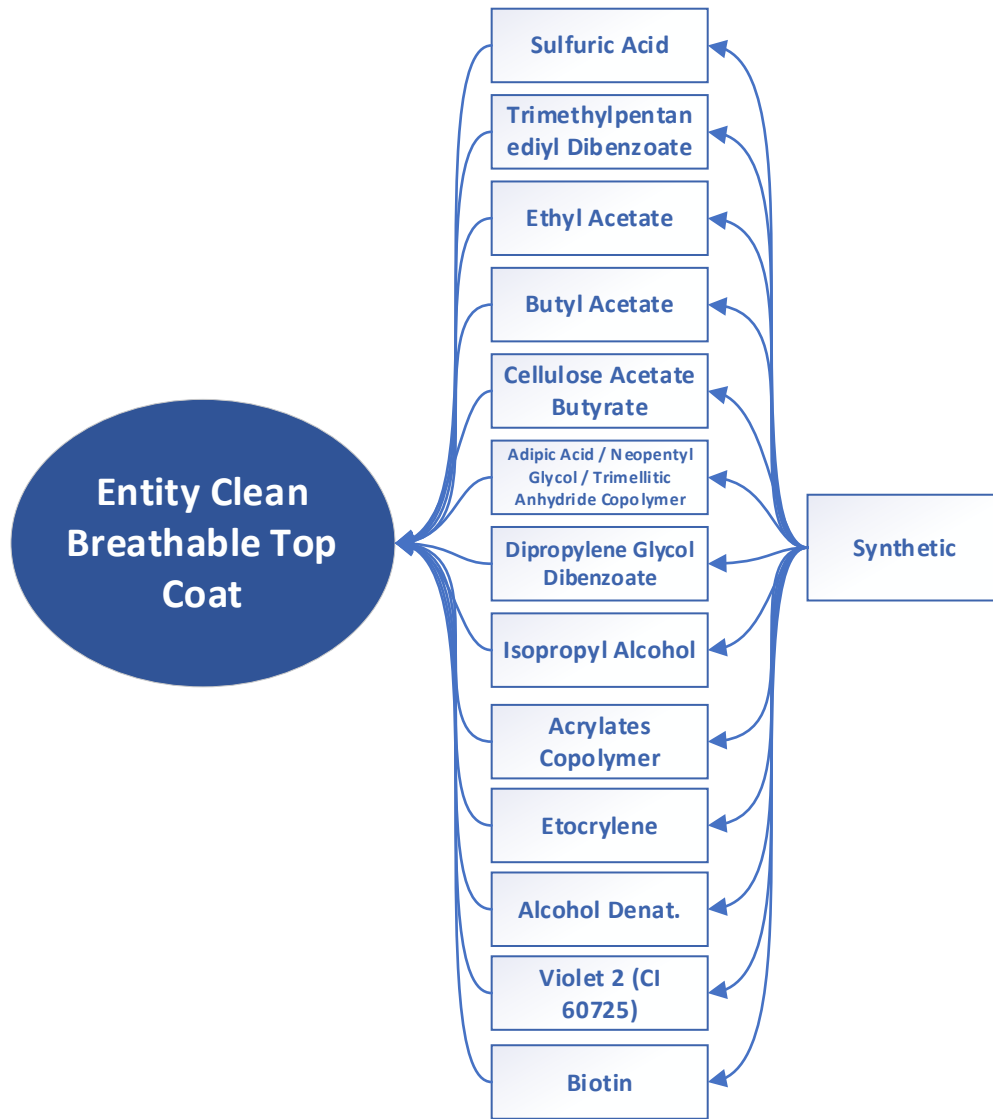

Violet 2: – **Halal** (Aslan) [D&C Violet 2 is a synthetic dye produced from petroleum or coal tar sources; this dye is FDA-approved for use in pharmaceuticals and cosmetics.]

Biotin: – **Halal** (Aslan) [Biotin, also called vitamin B<sub>7</sub>, is one of the B vitamins. It is involved in a wide range of metabolic processes, both in humans and in other organisms, primarily related to the utilization of fats, carbohydrates, and amino acids. The name biotin derives from the Greek word “bios” and the suffix “-in”.]

Concerns – None

## PRODUCT PROFILE

### Entity Clean Breathable Top Coat

### Entity Clean Breathable Base Coat

"Nail professionals seal all manicures with a top coat for a reason: It helps color last longer. When you pair a long-lasting polish with a top coat, you can even get a seven-day wear. Top coats can also help block UV rays from damaging color, protecting it from water and other things your hands regularly touch."

## Ingredient Status

Sulfuric Acid: – **Halal** (Aslan) [Sulfuric acid or sulphuric acid, known in antiquity as oil of vitriol, is a mineral acid composed of the elements sulfur, oxygen and hydrogen, with the molecular formula  $H_2SO_4$ . It is a colorless, odorless and viscous liquid that is miscible with water.]

Trimethylpentanediyl Dibenzoate: – **Halal** (Aslan) [Viscosity Controlling Agent - Maintains or alters the thickness of a liquid, mostly used in cosmetics]

Ethyl Acetate: – **Halal** (Aslan) [Ethyl acetate is the organic compound with the formula  $CH_3-COO-CH_2-CH_3$ , simplified to  $C_4H_8O_2$ . This colorless liquid has a characteristic sweet smell and is used in glues, nail polish removers, and in the decaffeination process of tea and coffee.]

Butyl Acetate: – **Halal** (Aslan) [n-Butyl acetate, also known as butyl ethanoate, is an ester that is a colorless, flammable liquid at room temperature. It is found in many types of fruit, where along with other chemicals, it imparts characteristic flavors and has a sweet smell of banana or apple.]

Cellulose Acetate Butyrate: – **Halal** (Aslan) [Cellulose acetate butyrate (CAB) is a mixed ester thermoplastic derivative of cellulose acetate that contains both acetate and butyrate functional groups. It has improved weathering resistance and lower moisture absorption compared to cellulose acetate. The exact properties of a CAB compound is determined by the composition of butyrate vs acetate functional groups.]

Adipic Acid: – **Halal** (Aslan) [Adipic acid or hexanedioic acid is the organic compound with the formula  $(CH_2)_4(COOH)_2$ . From an industrial perspective, it is the most important dicarboxylic acid: about 2.5 billion kilograms of this white crystalline powder are produced annually, mainly as a precursor for the production of nylon.]

Dipropylene Glycol Dibenzoate: – **Halal** (Aslan) [Dipropylene glycol finds many uses as a plasticizer, an intermediate in industrial chemical reactions, as a polymerization initiator or monomer, and as a solvent. Its low toxicity and solvent properties make it an ideal additive for perfumes and skin and hair care products.]

Isopropyl Alcohol: – **Halal** (Aslan) [Isopropyl alcohol is a colorless, flammable chemical compound with a strong odor. As an isopropyl group linked to a hydroxyl group, it is the simplest example of a secondary alcohol, where the alcohol carbon atom is attached to two other carbon atoms. It is a structural isomer of 1-propanol and ethyl methyl ether.]

Acrylates Copolymer: – **Halal** (Aslan) [Acrylates Copolymer is an excellent film forming polymer that brings water-resistance to cosmetics products. It is used in color cosmetics, sun & skin care, hair care products, shaving creams and moisturizers.]

Etocrylene: – **Halal** (Aslan) [Etocrylene is an organic ester that appears as an off-white crystalline powder and functions as a UV absorber. When applied to the skin, this product absorbs UV rays. It can also be used to protect cosmetics and personal care products from deterioration.]

Alcohol Denat: – **Halal** (Aslan) [Denatured alcohol is ethanol that's been mixed with other ingredients. Ethanol — also known as grain alcohol — is alcohol at its most basic. However, ethanol is dangerous to drink in large quantities, so it's “denatured” with additional ingredients to discourage people from drinking it]

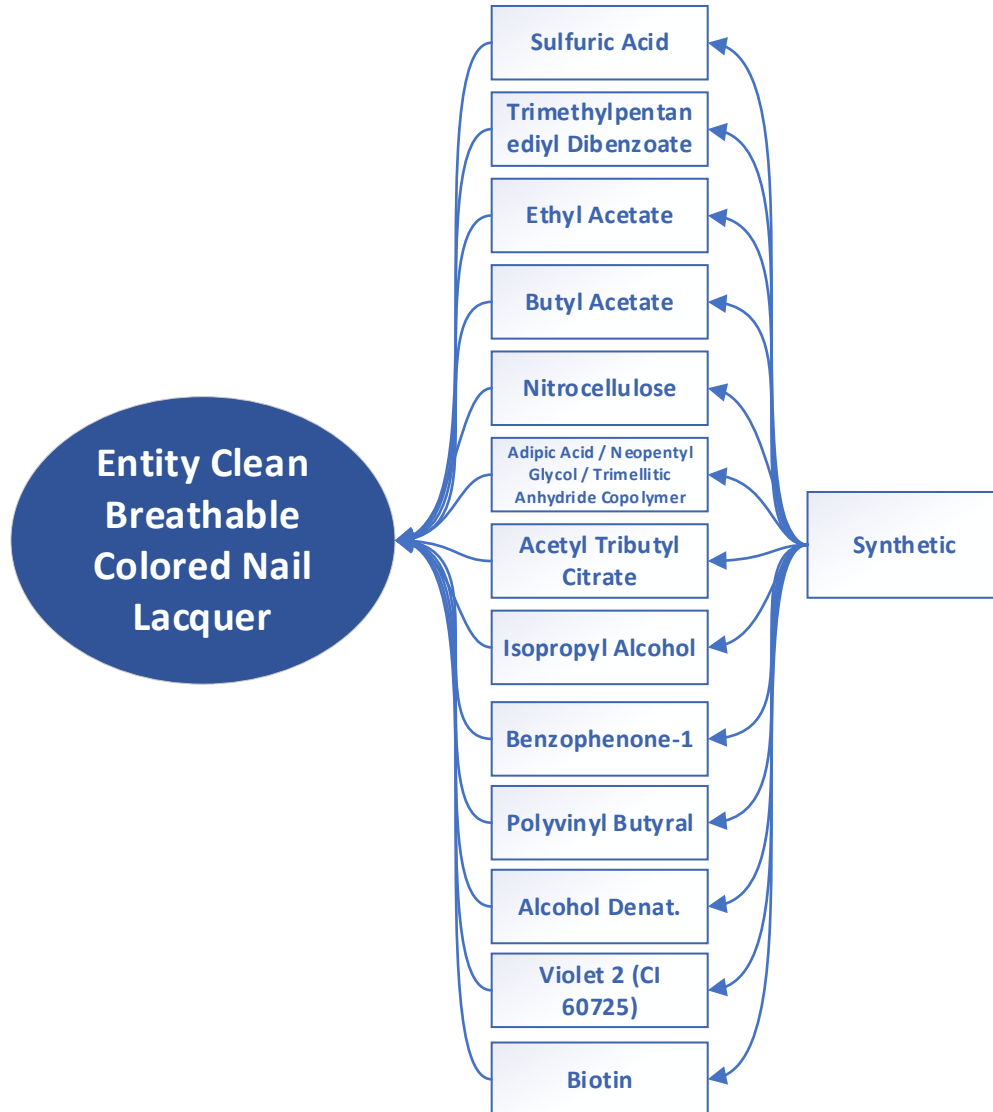

Violet 2: – **Halal** (Aslan) [D&C Violet 2 is a synthetic dye produced from petroleum or coal tar sources; this dye is FDA-approved for use in pharmaceuticals and cosmetics.]

Biotin: – **Halal** (Aslan) [Biotin, also called vitamin B<sub>7</sub>, is one of the B vitamins. It is involved in a wide range of metabolic processes, both in humans and in other organisms, primarily related to the utilization of fats, carbohydrates, and amino acids. The name biotin derives from the Greek word “bios” and the suffix “-in”.]

It is involved in a wide range of metabolic processes, both in humans and in other organisms, primarily related to the utilization of fats, carbohydrates, and amino acids. The name biotin derives from the Greek word "bios" and the suffix "-in".]

Stearalkonium Bentonite: – **Halal** (Aslan) [suspending agent - nonsurfactant, gel forming, and viscosity controlling. This ingredient is a reaction product of bentonite, a type of aluminosilicate clay, and stearalkonium chloride, a quaternary amine surfactant and antimicrobial agent.]

Acrylates Copolymer: – **Halal** (Aslan) [Acrylates Copolymer is an excellent film forming polymer that brings water-resistance to cosmetics products. It is used in color cosmetics, sun & skin care, hair care products, shaving creams and moisturizers.]

Styrene: – **Halal** (Aslan) [Styrene is an organic compound with the chemical formula C<sub>6</sub>H<sub>5</sub>CH=CH<sub>2</sub>. This derivative of benzene is a colorless oily liquid, although aged samples can appear yellowish. The compound evaporates easily and has a sweet smell, although high concentrations have a less pleasant odor.]

Trimethylpentanediyl Dibenzoate: – **Halal** (Aslan) [Viscosity Controlling Agent - Maintains or alters the thickness of a liquid, mostly used in cosmetics]

Silica: – **Halal** (Aslan) [Silicon dioxide, also known as silica, is an oxide of silicon with the chemical formula SiO<sub>2</sub>, most commonly found in nature as quartz and in

various living organisms. In many parts of the world, silica is the major constituent of sand.]

Sorbic Acid: – **Halal** (Aslan) [Sorbic acid, or 2,4-hexadienoic acid, is a natural organic compound used as a food preservative. It has the chemical formula  $\text{CH}_3(\text{CH})_4\text{CO}_2\text{H}$ . It is a colourless solid that is slightly soluble in water and sublimates readily. It was first isolated from the unripe berries of the *Sorbus aucuparia*, hence its name.]

Aluminum Powder (CI 77000): – **Halal** (Aslan) [Aluminum is the second most abundant metallic element in the Earth's crust after silicon, yet it is a comparatively new industrial metal that has been produced in commercial quantities for just over 100 years. It weighs about one-third as much as steel or copper; is malleable, ductile, and easily machined and cast; and has excellent corrosion resistance and durability.]

Calcium Aluminum Borosilicate: – **Halal** (Aslan) [Calcium Aluminum Borosilicate Description. A mineral-derived thickening agent consisting of calcium, aluminum, and silicates of the mineral boron. Its safety has been evaluated and was considered safe as used in cosmetics. This dry, inert ingredient is often used in powders and does not penetrate skin.]

Calcium Sodium Borosilicate: – **Halal** (Aslan) [Calcium sodium borosilicate and calcium aluminum borosilicate are shimmering powders composed of very tiny flakes of shiny glass-type compounds. Frequently used in makeup, they give the skin a gorgeous glow.]

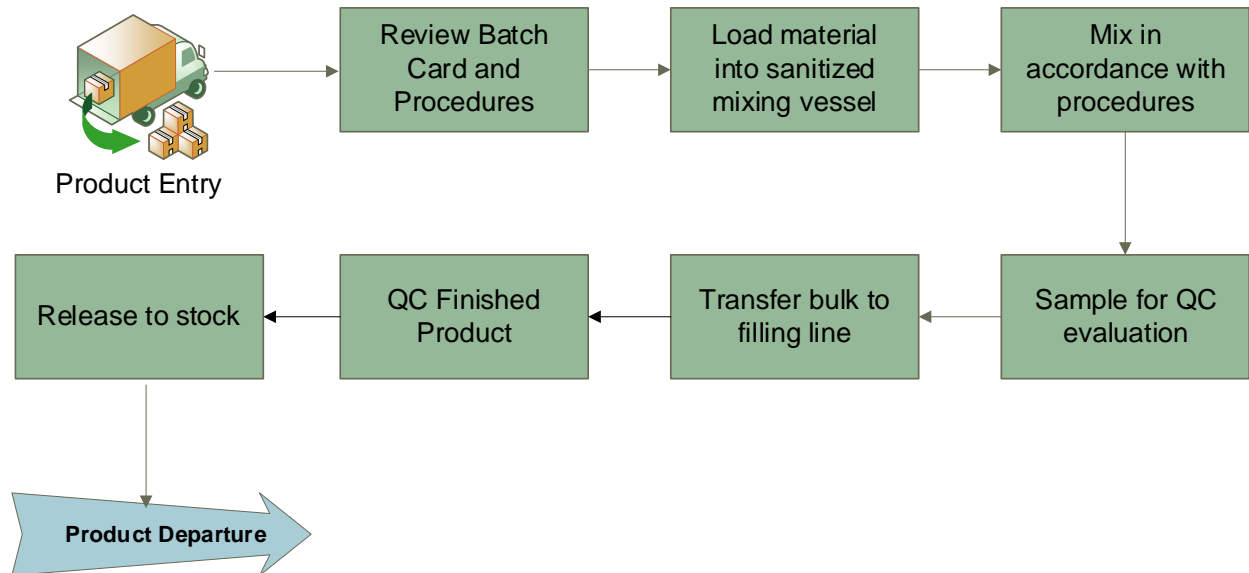

Ferric Ammonium Ferrocyanide: – **Halal** (Aslan) [Inorganic salt of ferric ferrocyanide used as a coloring agent in cosmetics for application to skin and eye area, but not to the lips. Like all cosmetic coloring agents, this one is subject to strict regulations controlling its use.]

Iron Oxides: – **Halal** (Aslan) [Iron oxides are chemical compounds composed of iron and oxygen. There are sixteen known iron oxides and oxyhydroxides, the best known of which is rust, a form of iron (III) oxide. Iron oxides and oxyhydroxides are widespread in nature and play an important role in many geological and biological processes.]

Manganese Violet: – **Halal** (Aslan) [Manganese violet is the inorganic compound called ammonium manganese (III) pyrophosphate. This material is a popular inorganic pigment. It imparts a violet color to cosmetics and personal care products.]

Concerns – None

## PROCESSING OVERVIEW

## **CLEANING METHOD**

### Description:

- 3.1 Wear the appropriate PPE before starting cleaning the equipment.
- 3.2 Put the acetone bucket up in the electrical mixer. Making sure the propeller is all inside the acetone.
- 3.3 Let it run for about 5 minutes.
- 3.4 Pull the mixer up and spray, very carefully, the propeller with acetone, holding a napkin behind to gather all acetone that splash out of the machine.
- 3.5 Clean the rim of the mixer perfectly with acetone as well, always holding a napkin behind.
- 3.6 Once the top of the machine is complete clean, pull the bucket off the base and clean the base as well.
- 3.7 Dry the machine completely.
- 3.8 Mixer is ready for the next job.

Frequency: As needed.
