COMPANY BACKGROUND

Halal Watch World LLC is a halal certification limited liability corporation based in the state of New York, and has operated in the certification industry since 1990. HWW is an organization that stands upon the trust of the Muslim public, and believes that it is imperative that their trust never be jeopardized. We maintain standards to the highest degree of scrutiny and perform regular audits for the protection of our constituents.

Halal Watch World understands that halal certification is a communal obligation (فرض كفاية), meaning, at least one person of the community must uphold it. If no one takes up this responsibility, the entire community bears a burden of sin. Therefore, we must be extra diligent with this effort. We realize the seriousness of the matter and understand the dire consequences of not filling this duty to the fullest capacity. God explains this to us in the Holy Quran by His statement:

“ And say not concerning that which your tongue says falsely: 'This is Halal and this is Haram,' so as to invent lies against Allah. Verily, those who invent lies against Allah will never prosper...A passing brief enjoyment (will be theirs), but they will have a painful torment.”

[Al Quran] 16:116-117

HWW ensures to the best of its ability a high level of authenticity is upheld. This allows them to gain the trust of the Muslim community, and garner strong relationships with companies who produce, process, and distribute halal products at all levels. By this, they are able to offer halal producing company's guidance and consultation on the direction of their processes and products, while ensuring that Islamic dietary standards are always maintained and monitored. Muslims can use this information in order to make well informed decisions about what they choose to eat.

Legal Filings: Halal Watch World holds registered trademark number 4728733, and Department of State (New York) number 4814343. Halal Watch World is also a registered halal certifying organization with The Department of Agriculture and Markets of New York State (See supporting documentation).

We begin in the name of God SWT

CERTIFICATION CONSIDERATIONS

There are 4 main factors taken into consideration when determining the halal status of a product:

1. Is the product/ingredient Halal Aslan (by default)?

If the product is Halal by default, then there will be no ingredient investigation conducted. An audit of the HPF (Halal Product Facility), facility related documents and product identification documentation will however, still be required.

2. Is the product/ingredient Halal certified via another organization?

If another organization certifies the product as Halal, then it is incumbent upon us to perform a *tahqeeq* (verification) certification of the establishment. We must be able to ascertain that the certifying body is competent and capable of determining the status of such products. In the event that we are unable to gain this information, our organization must inspect the location of production before certifying.

3. What is the Risk Assessment of the Facility?

Each HPF (Halal Product Facility) must be assessed and assigned an appropriate level of risk. Each facility is graded according to assessed risk. As risk increases, guidelines, restrictions, and measures become more stringent. Risk is determined according to the products present in the facility, product and process management, and the equipment utilized for processing. Any product/s made with or derived from the items mentioned below would be considered Haram:

1. Human derived ingredients
2. Pork
3. Donkey (excluding the Onager)
4. Animals with fangs or talons (Carnivorous)
(Excluding Hyena and Fox according to school of thought)
5. Animals not slaughtered according to Islamic ritual rites
6. Carrion
7. All forms of filth (Najjis) i.e. Urine, Excrement, Blood, Pus, Vomit, etc
8. Insects (other than locusts)
9. Animals fed with more than 50% of any of the above without being fed on a pure diet for a stipulated number of days (The Jallaalah)
10. Any intoxicants
11. Anything toxic or harmful to the body (such

as cigarettes)

12. Anything processed, made, produced, manufactured, and/or stored using utensils, equipment, and/or machinery in contact with any of the above that have not been cleansed according to standards which remove contaminants.

HiRF: High Risk Facility

Any facility that utilizes item/s listed above or a derivative thereof within the HPF and processes both halal and haram products using indifferent tools, machinery, or utensils. Thus, HiRF's by nature involve contaminants in some way in its processing.

MeRF: Medium Risk Facility

Any facility that processes both halal and haram products using segregated tools, machinery, or utensils to the exclusion of items listed above. Facilities that process any of these items, even if segregation methods are employed, are to be deemed HiRF's.

LoRF: Low Risk Facility

Any facility that does not process haram products on or inside of the premises.

As mentioned earlier, in relation to each risk level there are guidelines, restrictions and measures in place for the avoidance of contamination. Before any facility or any product made in said facility can be considered Halal suitable or certified Halal, these guidelines will have to be strictly adhered to.

Regarding contamination, products cannot be cooked upon or within the same utensils without proper cleansing. This means that any liquid substance that interacts with non-halal products becomes contaminated. This includes oil, and other wet cooking surfaces. Thus, if a vat of oil is used to cook non-halal products (which is considered as filth), it cannot be used to cook Halal products without contaminating it.

4. Are there any contents in the product that contain impermissible ingredients?

We refer to the list of impermissible consumables on the previous pages. If the product under audit is found to contain any of the ingredients on the ban list, these products cannot be considered as halal, unless said ingredients are replaced with halal suitable alternatives.

Client Details: Aviva Natural Supplements

FACILITY PROFILE

Aviva Natural Supplements is a Certified UL GMP & USDA turnkey contract manufacturer headquartered in New Brunswick, NJ.

PRODUCT PROFILE

Megaton Silver Tablet

Megaton Silver Tablet

No description given.

Ingredient Status

Beta Carotene: – **Halal** (Aslan) [Beta-carotene is a type of substance called a carotenoid. Carotenoids give plants, such as carrots, sweet potatoes, and apricots, their reddish-violet colors. Beta-carotene is a provitamin. This means it's used by your body to make vitamin A. Provitamin A is only found in plants.]

Vitamin C Powder: – **Halal** (Aslan) [Vitamin C is a water-soluble vitamin found in citrus and other fruits and vegetables, also sold as a dietary supplement and as a topical "serum" ingredient to treat melasma and wrinkles on the face. It is used to prevent and treat scurvy.]

Vitamin D3 100,000 IU/G: – **Halal** (Aslan) [Vitamin D is a group of fat-soluble secosteroids responsible for increasing intestinal absorption of calcium, magnesium, and phosphate, and many other biological effects. In humans, the most important compounds in this group are vitamin D₃ and vitamin D₂.]

Vitamin C Powder: – **Halal** (Aslan) [Vitamin C is a water-soluble vitamin found in citrus and other fruits and vegetables, also sold as a dietary supplement and as a topical "serum" ingredient to treat melasma and wrinkles on the face. It is used to prevent and treat scurvy.]

Vitamin E D-Alpha Succinate 1210 Granular: – **Halal** (Aslan) [alpha-Tocopherol succinate is a form of vitamin E used to treat and prevent vitamin deficiencies. Generic Name Alpha-Tocopherol succinate DrugBank Accession Number DB14001 Background. Alpha-tocopherol is the primary form of vitamin E that is preferentially used by the human body to meet appropriate dietary requirements]

Vitamin B1 Thiamine HCL: – **Halal** (Aslan) [Vitamin B1, also called thiamine or thiamin, is one of 8 B vitamins. All B vitamins help the body convert food (carbohydrates) into fuel (glucose), which the body uses to produce energy. These B vitamins, often referred to as B-complex vitamins, also help the body metabolize fats and protein.]

Vitamin B2 Powder: – **Halal** (Aslan) [Riboflavin, also known as vitamin B₂, is a vitamin found in food and sold as a dietary supplement. It is essential to the formation of two major coenzymes, flavin mononucleotide and flavin adenine dinucleotide.]

Inositol Hexanicotinate: – **Halal** (Aslan) [Inositol hexanicotinate (also known as inositol hexaniacinate or inositol nicotinate) is the hexanicotinic acid ester of meso-inositol. This chemical compound consists of six molecules of nicotinic acid (niacin) with an inositol molecule in the center of the structure.]

Vitamin B6 HCL: – **Halal** (Aslan) [Pyridoxine (vitamin B6) is used to prevent or treat low levels of vitamin B6 in people who do not get enough of the vitamin from their diets. Most people who eat a normal diet do not need extra vitamin B6.]

Folic Acid Pure: – **Halal** (Aslan) [Folic acid supplements are a synthetic form of vitamin B9 that the body converts to folate upon ingestion. Like all B vitamins, folic acid is water-soluble. It's an essential vitamin that individuals must consume through food or supplementation.]

Vitamin B12 (Cyanocobalamin) 1%: – **Halal** (Aslan) [Vitamin B₁₂, also known as cobalamin, is a water-soluble vitamin involved in metabolism. It is one of eight B vitamins. It is required by animals, which use it as a cofactor in DNA synthesis, and in both fatty acid and amino acid metabolism.]

Biotin Pure: – **Halal** (Aslan) [Biotin is one of the B vitamins. It is involved in a wide range of metabolic processes, both in humans and in other organisms, primarily related to the utilization of fats, carbohydrates, and amino acids. The name biotin, borrowed from the German Biotin, derives from the Ancient Greek word βιοτος and the suffix "-in".]

D-Calcium Pantothenate: – **Halal** (Aslan) [D CALCIUM PANTOTHENATE is a salt of vitamin B5 and works inside the scalp and increase hair growth. Thus, it provides essential nutrients and reduces hair fall, strengthens hair from roots, nourishes follicles from within, stimulates the growth of existing and new hair.]

Ferrous Fumarate 30%: – **Halal** (Aslan) [Ferrous fumarate is a type of iron that's used as a medicine to treat and prevent iron deficiency anaemia. Iron helps the body to make healthy red blood cells which carry oxygen around the body.]

Magnesium Oxide Granular: – **Halal** (Aslan) [Magnesium oxide, or magnesia, is a white hygroscopic solid mineral that occurs naturally as periclase and is a source of magnesium. It has an empirical formula of MgO and consists of a lattice of Mg²⁺ ions and O²⁻ ions held together by ionic bonding.]

Zinc Oxide 80%: – **Halal** (Aslan) [Zinc oxide is an inorganic compound with the formula ZnO. It is a white powder that is insoluble in water. ZnO is used as an additive in numerous materials and products including cosmetics and food supplements.]

Selenium Amino Acid Chelate 0.2%: – **Halal** (Aslan) [Selenium amino acid chelate (Selenium AAC), is a chelated form of the essential trace mineral Selenium, bonded with an amino acid.]

Copper Oxide: – **Halal** (Aslan) [Copper oxide is a compound from the two elements copper and oxygen. Copper oxide may refer to: Copper(I) oxide (cuprous oxide, Cu₂O) Copper(II) oxide (cupric oxide, CuO).]

Manganese Amino Acid Chelate 20%: – **Halal** (Aslan) [Manganese is an essential trace element that is naturally present in many foods and available as a dietary supplement. Manganese is a cofactor for many enzymes, including manganese superoxide dismutase, arginase, and pyruvate carboxylase. Through the action of these enzymes, manganese is involved in amino acid, cholesterol, glucose, and carbohydrate metabolism; reactive oxygen species scavenging; bone formation; reproduction; and immune response. Manganese also plays a role in blood clotting and hemostasis in conjunction with vitamin K.]

Potassium Chloride: – **Halal** (Aslan) [Potassium chloride, also known as potassium salt, is used as a medication to treat and prevent low blood potassium. Low blood potassium may occur due to vomiting, diarrhea, or certain medications. The concentrated version should be diluted before use. It is given by slow injection into a vein or by mouth.]

Choline Bitartrate: – **Halal** (Aslan) [Choline bitartrate is an organic compound with the chemical formula $[(\text{CH}_3)_3\text{NCH}_2\text{CH}_2\text{OH}]^+\text{HOOC}-\text{CH}-\text{CH}-\text{COO}^-$. It is a white crystalline powder with an acid taste. It is hygroscopic when exposed to air.]

Para-Aminobenzoic Acid: – **Halal** (Aslan) [4-Aminobenzoic acid is an organic compound with the formula $\text{H}_2\text{NC}_6\text{H}_4\text{CO}_2\text{H}$. PABA is a white solid, although commercial samples can appear gray. It is slightly soluble in water. It consists of a benzene ring substituted with amino and carboxyl groups. The compound occurs extensively in the natural world.]

Panax (Korean) Ginseng Root Ext 4:1: – **Halal** (Aslan) [Panax ginseng is a plant that grows in Korea, China, and Siberia. It's considered an adaptogen, which are natural substances that are believed to stimulate the body's resistance to stressors. Panax ginseng contains many active chemicals. The most important are called ginsenosides or panaxosides.]

Maca Root PE 4:1: – **Halal** (Aslan) [Maca, also called Ginseng Andin, Peruvian Ginseng, *Lepidium meyenii*, or *Lepidium peruvianum*, is a relative of radish and smells similar to butterscotch. Maca is a plant that grows on the high plateaus of the Andes Mountains. It's been cultivated as a root vegetable for at least 3000 years.]

Lutein 5%: – **Halal** (Aslan) [Lutein is a xanthophyll and one of 600 known naturally occurring carotenoids. Lutein is synthesized only by plants, and like other xanthophylls is found in high quantities in green leafy vegetables such as spinach, kale and yellow carrots.]

Lycopene 5%: – **Halal** (Aslan) [Lycopene is an organic compound classified as a tetraterpene and a carotene. Lycopene is a bright red carotenoid hydrocarbon found in tomatoes and other red fruits and vegetables.]

Boron Amino Acid Chelate 5%: – **Halal** (Aslan) [In dietary supplements, boron is present in many different forms, including sodium borate, sodium tetraborate, boron amino acid chelate, boron ascorbate, boron aspartate, boron citrate, boron gluconate, boron glycinate, boron picolinate, and calcium fructoborate [6,27]. In a small human study, boron as sodium tetraborate significantly increased plasma boron levels within 4–6 hours of consumption [5], but no data are available on the relative bioavailability of different forms of supplemental boron.]

Microcrystalline Cellulose 102: – **Halal** (Aslan) [Microcrystalline cellulose is a term for refined wood pulp and is used as a texturizer, an anti-caking agent, a fat substitute, an emulsifier, an extender, and a bulking agent in food production. The most common form is used in vitamin supplements or tablets.]

Magnesium Stearate: – **Halal** (Aslan) [Magnesium stearate is the chemical compound with the formula Mg_2 . It is a soap, consisting of salt containing two equivalents of stearate and one magnesium cation. Magnesium stearate is a white, water-insoluble powder. Its applications exploit its softness, insolubility in many solvents, and low toxicity]

Silicon DiOxide (Silica): – **Halal** (Aslan) [Silicon dioxide, also known as silica, is an oxide of silicon with the chemical formula SiO_2 , most commonly found in nature as quartz. In many parts of the world, silica is the major constituent of sand.]

Stearic Acid: – **Halal** (Aslan) [Stearic acid is a saturated fatty acid with an 18-carbon chain. The IUPAC name is octadecanoic acid. It is a soft waxy solid with the formula $CH_3(CH_2)_{16}CO_2H$. The triglyceride derived from three molecules of stearic acid is called stearin.]

Croscarmellose Sodium: – **Halal** (Aslan) [Sodium croscarmellose is an internally cross-linked sodium carboxymethylcellulose for use as a superdisintegrant in pharmaceutical formulations. E468 is the E number of crosslinked sodium carboxymethyl cellulose, used in food as an emulsifier.]

Molybdenum Glycinate Chelate 2.5%: – **Halal** (Aslan) [Molybdenum glycinate chelate (2.5%) is needed for the proper functioning of certain enzyme-dependent processes, including iron metabolism. It also supports a healthy inflammation response. Formulators can add molybdenum to support healthy: Detoxification.]

Chromium Chloride 19%: – **Halal** (Aslan) [Chromium(III) chloride is an inorganic chemical compound with the chemical formula $CrCl_3$. It forms several hydrates with the formula $CrCl_3 \cdot nH_2O$, among which are hydrates where n can be 5 or 6.]

Vitamin A Acetate 500,000 IU/GM: – **Halal** (Aslan) [Retinyl acetate is a natural form of vitamin A which is the acetate ester of retinol. It has potential antineoplastic and chemopreventive activities. In the United States, retinyl acetate is classified generally recognized as safe in the amounts used to fortify foods with vitamin A.]

Vitamin K1 5%: – **Halal** (Aslan) [Vitamin K is a family of structurally similar, fat-soluble vitamins found in foods and marketed as dietary supplements. The human body requires vitamin K for post-synthesis modification of certain proteins that are required for blood coagulation or for controlling binding of calcium in bones and other tissues.]

Potassium Iodide: – **Halal** (Aslan) [Potassium iodide is a chemical compound, medication, and dietary supplement. It is a medication used for treating hyperthyroidism, in radiation emergencies, and for protecting the thyroid gland when certain types of radiopharmaceuticals are used.]

Di Calcium Phosphate: – **Halal** (Aslan) [Dicalcium phosphate is the calcium phosphate with the formula CaHPO_4 and its dihydrate. The "di" prefix in the common name arises because the formation of the HPO_4^{2-} anion involves the removal of two protons from phosphoric acid, H_3PO_4 . It is also known as dibasic calcium phosphate or calcium monohydrogen phosphate.]

Concerns – None.
