COMPANY BACKGROUND

Halal Watch World LLC is a halal certification limited liability corporation based in the state of New York, and has operated in the certification industry since 1990. HWW is an organization that stands upon the trust of the Muslim public, and believes that it is imperative that their trust never be jeopardized. We maintain standards to the highest degree of scrutiny and perform regular audits for the protection of our constituents.

Halal Watch World understands that halal certification is a communal obligation (فرض كفاية), meaning, at least one person of the community must uphold it. If no one takes up this responsibility, the entire community bears a burden of sin. Therefore, we must be extra diligent with this effort. We realize the seriousness of the matter and understand the dire consequences of not filling this duty to the fullest capacity. God explains this to us in the Holy Quran by His statement:

“ And say not concerning that which your tongue says falsely: 'This is Halal and this is Haram,' so as to invent lies against Allah. Verily, those who invent lies against Allah will never prosper...A passing brief enjoyment (will be theirs), but they will have a painful torment.”

[Al Quran] 16:116-117

HWW ensures to the best of its ability a high level of authenticity is upheld. This allows them to gain the trust of the Muslim community, and garner strong relationships with companies who produce, process, and distribute halal products at all levels. By this, they

are able to offer halal producing company's guidance and consultation on the direction of their processes and products, while ensuring that Islamic dietary standards are always maintained and monitored. Muslims can use this information in order to make well informed decisions about what they choose to eat.

Legal Filings: Halal Watch World holds registered trademark number 4728733, and Department of State (New York) number 4814343. Halal Watch World is also a registered halal certifying organization with The Department of Agriculture and Markets of New York State (See supporting documentation).

We begin in the name of God SWT

1

CERTIFICATION CONSIDERATIONS

There are 4 main factors taken into consideration when determining the halal status of a product:

1. Is the product/ingredient Halal Aslan (by default)?

If the product is Halal by default, then there will be no ingredient investigation conducted. An audit of the HPF (Halal Product Facility), facility related documents and product identification documentation will however, still be required.

2. Is the product/ingredient Halal certified via another organization?

If another organization certifies the product as Halal, then it is incumbent upon us to perform a *tahqeeq* (verification) certification of the establishment. We must be able to ascertain that the certifying body is competent and capable of determining the status of such products. In the event that we are unable to gain this information, our organization must inspect the location of production before certifying.

3. What is the Risk Assessment of the Facility?

Each HPF (Halal Product Facility) must be assessed and assigned an appropriate level of risk. Each facility is graded according to assessed risk. As risk increases, guidelines, restrictions, and measures become more stringent. Risk is determined according to the products present in the facility, product and process management, and the equipment

utilized for processing. Any product/s made with or derived from the items mentioned below would be considered Haram:

1. Human derived ingredients
2. Pork
3. Donkey (excluding the Onager)
4. Animals with fangs or talons (Carnivorous)
(Excluding Hyena and Fox according to school of thought)
5. Animals not slaughtered according to Islamic ritual rites
6. Carrion
7. All forms of filth (Najis) i.e. Urine, Excrement, Blood, Pus, Vomit, etc
8. Insects (other than locusts)
9. Animals fed with more than 50% of any of the above without being fed on a pure diet for a stipulated number of days (The Jallaalah)
10. Any intoxicants
11. Anything toxic or harmful to the body (such as cigarettes)
12. Anything processed, made, produced, manufactured, and/or stored using utensils, equipment, and/or machinery in contact with any of the above that have not been cleansed according to standards which remove contaminants.

HiRF: High Risk Facility

Any facility that utilizes item/s listed above or a derivative thereof within the HPF and processes both halal and haram products using indifferent tools, machinery, or utensils. Thus, HiRF's by nature involve contaminants in some way in its processing.

MeRF: Medium Risk Facility

Any facility that processes both halal and haram products using segregated tools, machinery, or utensils to the exclusion of items listed above. Facilities that process any of these items, even if segregation methods are employed, are to be deemed HiRF's.

LoRF: Low Risk Facility

Any facility that does not process haram products on or inside of the premises.

As mentioned earlier, in relation to each risk level there are guidelines, restrictions and measures in place for the avoidance of contamination. Before any facility or any product

made in said facility can be considered Halal suitable or certified Halal, these guidelines will have to be strictly adhered to.

Regarding contamination, products cannot be cooked upon or within the same utensils without proper cleansing. This means that any liquid substance that interacts with non-halal products becomes contaminated. This includes oil, and other wet cooking surfaces. Thus, if a vat of oil is used to cook non-halal products (which is considered as filth), it cannot be used to cook Halal products without contaminating it.

4. Are there any contents in the product that contain impermissible ingredients?

We refer to the list of impermissible consumables on the previous pages. If the product under audit is found to contain any of the ingredients on the ban list, these products cannot be considered as halal, unless said ingredients are replaced with halal suitable alternatives.

Client Details: Aviva Natural Supplements

FACILITY PROFILE

Aviva Natural Supplements is a Certified GMP & USDA turnkey contract manufacturer headquartered in New Brunswick, NJ. We specialize in custom formulation, custom blending, encapsulations and compression along with state-of-the-art high-speed packaging lines

Megaton Energy Boost Gelatin Capsule

Megaton Energy Boost Gelatin Capsule

(No Description Given)

Ingredient Status

Korean Ginseng Root Ext. 4:1: – **Halal** (Aslan) [Panax ginseng, ginseng, also known as Asian ginseng, Chinese ginseng, Japanese ginseng or Korean ginseng, is a species of

plant whose root is the original source of ginseng. It is a perennial plant that grows in the mountains of East Asia.]

Vitamin B1 Thiamine Mono: – **Halal** (Aslan) [Thiamine, also known as thiamin and vitamin B₁, is a vitamin, an essential micronutrient, that cannot be made in the body. It is found in food and commercially synthesized to be a dietary supplement or medication.]

Vitamin B2 Powder (Riboflavin): – **Halal** (Aslan) [Riboflavin, also known as vitamin B₂, is a vitamin found in food and sold as a dietary supplement. It is essential to the formation of two major coenzymes, flavin mononucleotide and flavin adenine dinucleotide.]

Vitamin B3 Crystalline Powder (Niacinamide): – **Halal** (Aslan) [Niacin, also known as nicotinic acid, is an organic compound and a form of vitamin B₃, an essential human nutrient. It can be manufactured by plants and animals from the amino acid tryptophan.]

Vitamin B6 Pyridoxine HCL: – **Halal** (Aslan) [Pyridoxine, is a form of vitamin B₆ found commonly in food and used as a dietary supplement. As a supplement it is used to treat and prevent pyridoxine deficiency, sideroblastic anaemia, pyridoxine-dependent...]

Folic Acid 10%: – **Halal** (Aslan) [Folate, also known as vitamin B₉ and folacin, is one of the B vitamins. Manufactured folic acid, which is converted into folate by the body, is used as a dietary supplement and in food fortification as it is more stable during processing and storage.]

Vitamin B12 (Cyanocobalamin) 1%: – **Halal** (Aslan) [Cyanocobalamin is a form of vitamin B₁₂ used to treat vitamin B₁₂ deficiency except in the presence of cyanide toxicity. The deficiency may occur in pernicious anemia, following surgical removal of the stomach, with fish tapeworm, or due to bowel cancer]

| Biotin 10%: – **Halal** (Aslan) [Biotin is one of the B vitamins. It is involved in a wide range of metabolic processes, both in humans and in other organisms, primarily related to the utilization of fats, carbohydrates, and amino acids. The name biotin, borrowed from the German Biotin, derives from the Ancient Greek word βίोटος and the suffix "-in"]

Pantothenic Acid (D-Calcium Pantothenate)– **Halal** (Aslan) [Pantothenic acid, also called vitamin B₅ is a water-soluble B vitamin and therefore an essential nutrient. All animals require pantothenic acid in order to synthesize coenzyme A – essential for fatty acid metabolism – as well as to, in general, synthesize and metabolize proteins, carbohydrates, and fats.]

L-Carnitine Fumarate: – **Halal** (Aslan) [This medication is a diet supplement used to prevent and treat low blood levels of carnitine. Carnitine is a substance made in the

body from meat and dairy products. It helps the body use certain chemicals (long-chain fatty acids) for energy and to keep you in good health.]

Microcrystalline Cellulose 102 (MCC): – **Halal** (Aslan) [Microcrystalline cellulose is a term for refined wood pulp and is used as a texturizer, an anti-caking agent, a fat substitute, an emulsifier, an extender, and a bulking agent in food production. The most common form is used in vitamin supplements or tablets.]

Di Calcium Phosphate, Dihydrate, Unmilled, FCC Grade: – **Halal** (Aslan) [Dicalcium phosphate is the calcium phosphate with the formula CaHPO_4 and its dihydrate. The "di" prefix in the common name arises because the formation of the HPO_4^{2-} anion involves the removal of two protons from phosphoric acid, H_3PO_4 . It is also known as dibasic calcium phosphate or calcium monohydrogen phosphate.]

Maltodextrin M100: – **Halal** (Aslan) [Maltodextrin is a polysaccharide that is used as a food ingredient. It is produced from vegetable starch by partial hydrolysis and is usually found as a white hygroscopic spray-dried powder. Maltodextrin is easily digestible, being absorbed as rapidly as glucose and may be either moderately sweet or almost flavorless.]

Magnesium Stearate: – **Halal** (Aslan) [Magnesium stearate is the chemical compound with the formula Mg_2 . It is a soap, consisting of salt containing two equivalents of stearate and one magnesium cation. Magnesium stearate is a white, water-insoluble powder. Its applications exploit its softness, insolubility in many solvents, and low toxicity.]

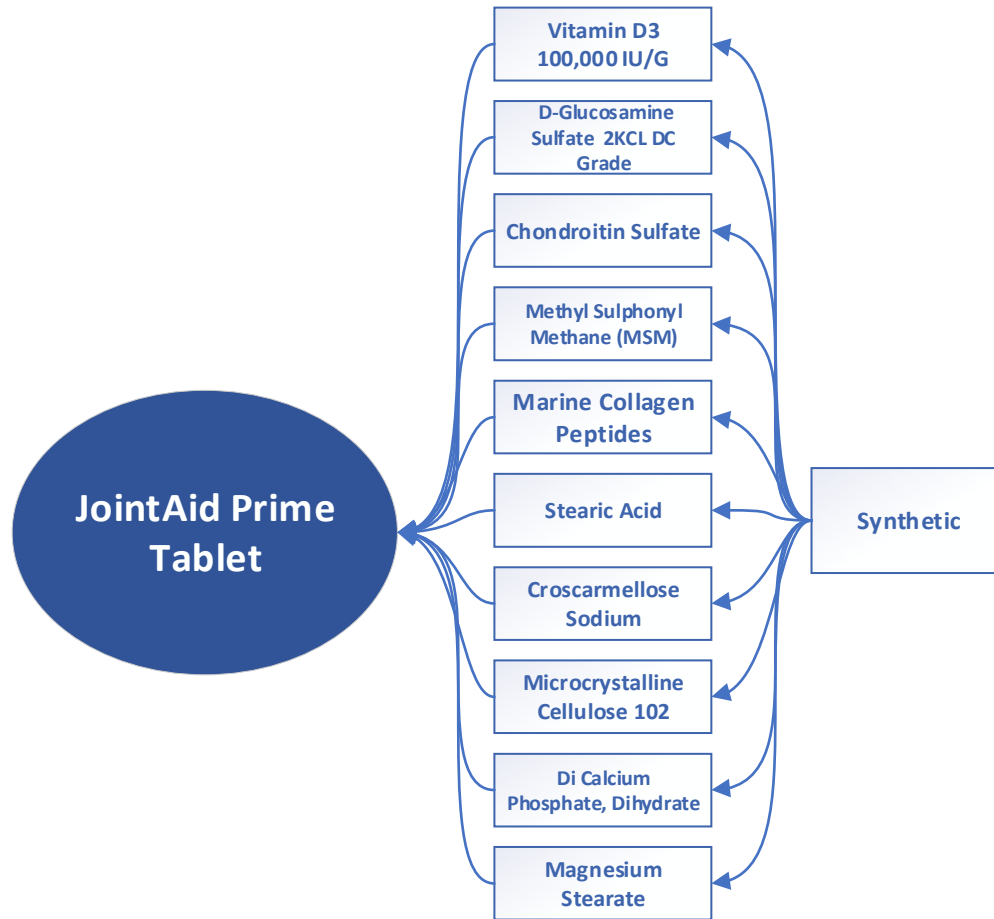

Silicon DiOxide (Silica): – **Halal** (Aslan) [Silicon dioxide, also known as silica, is an oxide of silicon with the chemical formula SiO_2 , most commonly found in nature as quartz. In many parts of the world, silica is the major constituent of sand.]

HPMC (Veg) Clear Capsules 0: – **Halal** (Aslan) [Vegetarian HPMC capsules are made from 100% plant-sourced ingredients i.e. hypromellose that digest easily. They are perfectly healthy and do not contain any animal-by products or animal-borne contaminants. They also do not trigger any allergic reaction or cause side effects, even on prolonged use.]

Concerns – None.

PRODUCT PROFILE

JointAid Prime Tablet

JointAid Prime Tablet

(No Description Given)

Ingredient Status

Vitamin D3 100,000 IU/G: – **Halal** (Aslan) [Vitamin D is a group of fat-soluble secosteroids responsible for increasing intestinal absorption of calcium, magnesium, and phosphate, and many other biological effects. In humans, the most important compounds in this group are vitamin D₃ and vitamin D₂.]

D-Glucosamine Sulfate 2KCL DC Grade: – **Halal** (Aslan) [Glucosamine is an amino sugar and a prominent precursor in the biochemical synthesis of glycosylated proteins and lipids. Glucosamine is part of the structure of two polysaccharides, chitosan and chitin. Glucosamine is one of the most abundant monosaccharides.]

Chondroitin Sulfate: – **Halal** (Aslan) [Chondroitin sulfate is a sulfated glycosaminoglycan composed of a chain of alternating sugars. It is usually found

attached to proteins as part of a proteoglycan. A chondroitin chain can have over 100 individual sugars, each of which can be sulfated in variable positions and quantities.]

Methyl Sulphonyl Methane (MSM): – **Halal** (Aslan) [Dimethyl sulfone is an organosulfur compound with the formula $(\text{CH}_3)_2\text{SO}_2$. It is also known by several other names including methyl sulfone and methylsulfonylmethane. This colorless solid features the sulfonyl functional group and is the simplest of the sulfones.]

Marine Collagen Peptides: – **Halal** (Aslan) [Marine collagen peptides are a health ingredient made from fish and used in a variety of health and beauty products. Like bovine, porcine and other fish collagens, these collagen peptides are produced from 100% natural animal sources – in this case, the skins of wild-caught ocean fish.]

Croscarmellose Sodium: – **Halal** (Aslan) [3 Croscarmellose Sodium (CCS) CCS is cross-linked carboxymethylcellulose sodium and used as a superdisintegrant (Zarmpi et al., 2017). CCS is hydrophilic, but, made insoluble and fibrous by cross-linking of sodium salt of carboxymethylcellulose.]

Microcrystalline Cellulose 102 (MCC): – **Halal** (Aslan) [Microcrystalline cellulose is a term for refined wood pulp and is used as a texturizer, an anti-caking agent, a fat substitute, an emulsifier, an extender, and a bulking agent in food production. The most common form is used in vitamin supplements or tablets.]

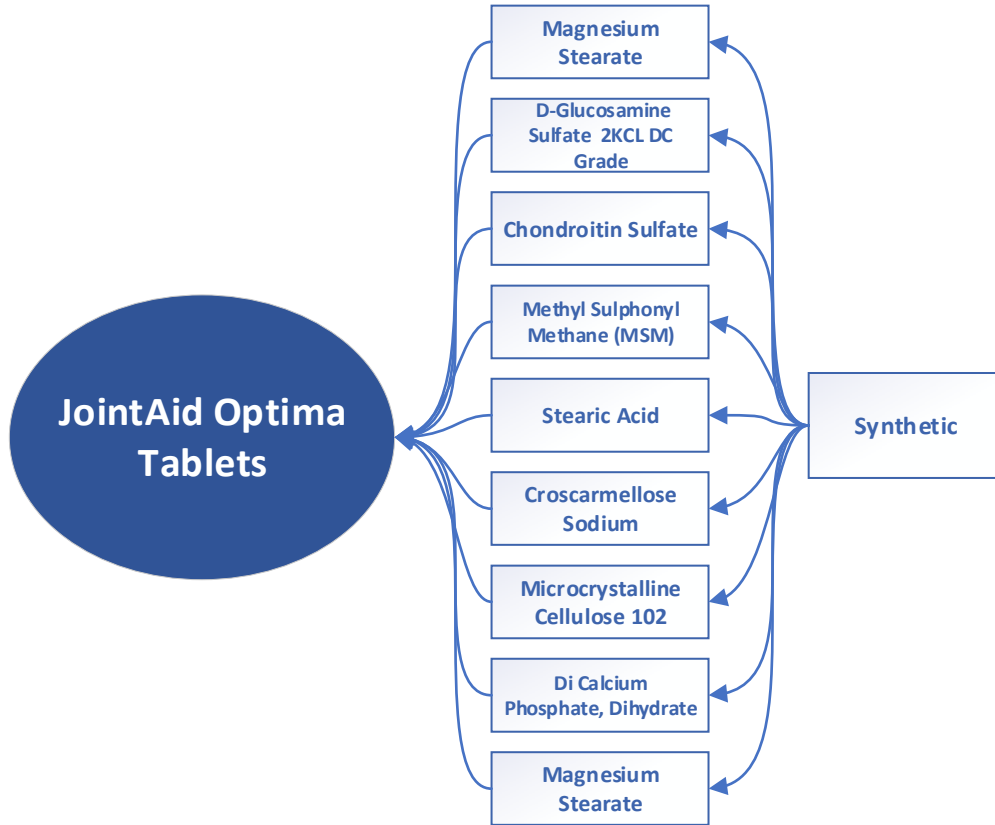

Di Calcium Phosphate, Dihydrate, Unmilled, FCC Grade: – **Halal** (Aslan) [Dicalcium phosphate is the calcium phosphate with the formula CaHPO_4 and its dihydrate. The "di" prefix in the common name arises because the formation of the HPO_4^{2-} anion involves the removal of two protons from phosphoric acid, H_3PO_4 . PROCESSING OVERVIEW

CLEANING METHOD

Description:

- A. All cleaning equipment, brushes or scrub pads must be maintained in good condition.
- Discard any damaged or soiled brushes or scrub pads.
- B. Only paper towels will be used for wiping the equipment. Cloth rags will be used for warehouse and other cleaning operations.
- C. Store all cleaning utensils and tools in labeled covered bins to prevent contamination.
- D. Product-contact surfaces for equipment used in wet-processing operations must be cleaned and sanitized. Cleaning and sanitizing of these surfaces are required before use and after any interruption during which the contact surface may become contaminated.
- E. Cleaning and sanitizing agents used to clean equipment must be approved for food contact use. See Approved Chemical List PD-004-F1.
- F. Single-service cleaning articles such as wipes and paper towels must be stored in appropriate containers, dispensed, used, and disposed of immediately in a manner that protects against contamination of components, dietary supplements, or any contact surface.

Frequency: Daily/As Needed.
