

Aldehyde C-16 (also known as Strawberry aldehyde) is well-known flavoring substance. Its name does not imply what substance it is as early day's naming scheme was cryptic to hide their actual identity to protect their intellectual properties. Actual chemical compound is Ethyl methyl phenyl glycidate. The halal certificate of Yancheng contains “7. Aldehyde C-16” name, not actual compound name as this is widely accepted and used name in fragrance and flavoring industries. Please see attached Wikipedia page’s description.
